Test Waveforms

Mainframe output, into 50 Ohms, at 100 kHz PRF and 80 ns pulse width:

10 ns/div. 10 V/div (100 mV × 40 dB):

Rising edge of the previous waveform:

500 ps/div. 10 V/div (100 mV × 40 dB):

Falling edge of the previous waveform:

500 ps/div. 10 V/div (100 mV × 40 dB):

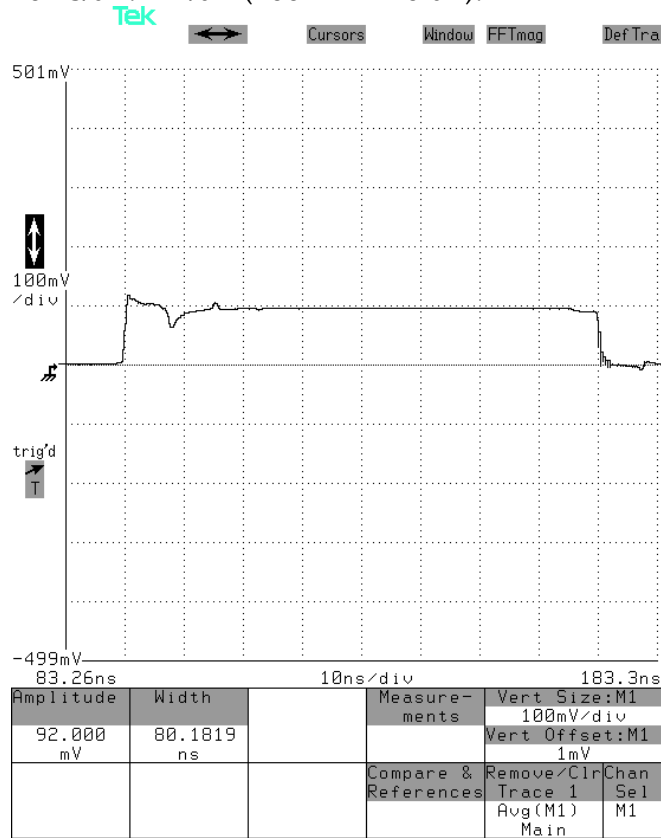

“MI” output of AVX-S1-P1B-T1B, into 50 Ohms, at 100 kHz PRF and 80 ns pulse width:

10 ns/div. 1 V/div (100 mV × 20 dB):

“M1” output of AVX-S1-P1B-T1B-HC, into 50 Ohms, at 100 kHz PRF and 80 ns pulse width:

10 ns/div. 1 V/div (100 mV × 20 dB):

The current-doubling transformer adds some reflections to the waveform. The reflections can be reduced to some extent by using long lengths of cable between the mainframe and the output module (suggested length in feet = PW in ns divided by 3). This may degrade the rise time, however.
